

Java

```
class Solution {  
    public int maximumRequests(int n, int[][] requests) {  
        }  
    }  
-----
```

JavaScript

```
/**  
 * @param {number} n  
 * @param {number[][]} requests  
 * @return {number}  
 */  
var maximumRequests = function(n, requests) {  
};  
-----
```

TypeScript

```
function maximumRequests(n: number, requests: number[][]): number {  
};  
-----
```

C++

```
class Solution {  
public:  
    int maximumRequests(int n, vector<vector<int>>& requests) {  
        }  
};  
-----
```

C#

```
public class Solution {  
    public int MaximumRequests(int n, int[][] requests) {  
        }  
}
```

Kotlin

```
class Solution {  
    fun maximumRequests(n: Int, requests: Array<IntArray>): Int {  
        }  
}
```

Go

```
func maximumRequests(n int, requests [][]int) int {  
}
```
